Bigger connections for a brighter future

The Virgin Media O₂ network continues to grow

Our national fibreoptic network has always been our crown jewel. It's the second largest network in the UK and most businesses can access our services.

Today, our network passes more than 17 million homes and businesses across the UK and traffic on our network grows by approximately 20% annually. This vast nationwide coverage, coupled with a dense local access footprint, means we're uniquely placed to provide both high-capacity backhaul links and last-mile access tails.

When Virgin Media and O₂ joined forces in 2021, it gave us the capacity to do even more amazing things for the UK's digital economy. The merger lit the fuse on a major £10 billion investment programme to extend our reach and upgrade our network. It's our biggest investment in over a decade.

Upgrading to full fibre

Following the merger, we announced our intention to upgrade our entire Hybrid-Fibre Coax (HFX) network to full fibre to the premises (FTTP) by 2028. This technology is capable of delivering symmetrical 10Gbps download and upload speeds and will be available as a wholesale service soon.

Extending our reach

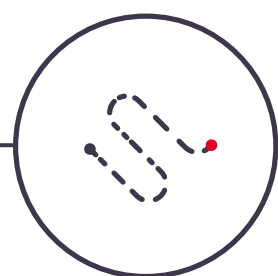

Through an agreement with nexfibre, Virgin Media O₂ will also expand its full-fibre network coverage by up to seven million additional premises by 2028. The combination of nexfibre and Virgin Media O₂'s network footprints will serve up to 23 million premises and see the creation of the UK's first national-scale challenger to BT Openreach, boosting choice and competition in the market. The nexfibre network is being built predominantly in greenfield areas not currently served by our existing footprint.

Increasing capacity

We're transforming our high bandwidth service portfolio through Project Spark; a multi-million-pound investment programme that is upgrading our existing national network infrastructure. Enhancements to our core, metro and edge sites mean our high bandwidth services are available in more locations, delivered faster and with greater automation.

Our wholesale connectivity services

Our partners and their customers are individuals. That's why we focus on working in partnership to understand the business requirement and recommend the right connectivity solution for them.

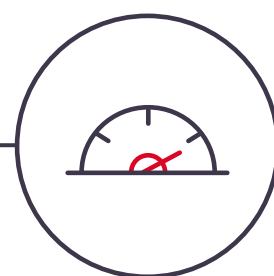

Dark Fibre

Dedicated, unlit optical fibre connections between two sites that provides virtually unlimited capacity.

Dark Fibre enables you to set up your own bespoke network by leasing unused fibre optic cabling, rather than relying on shared network connectivity.

We offer the largest available Dark Fibre coverage in the UK, accessible right across the country.

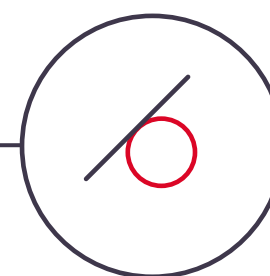

High Capacity Services

An optical connectivity service offering low latency and high bandwidth (10 to 100Gbps) that is provided using circuits which follow fixed paths between two locations.

You can choose between:

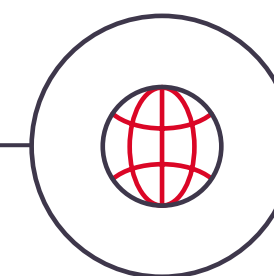

- Dedicated paths across our national network (National HCS)
- Shorter distance links on dedicated fibre, end-to-end (Dedicated HCS)
- Our Flexi Filter option offers the simplicity of a managed service (D-HCS) and the flexibility of direct access to optical filter ports. This means you can make the most of your own Dense Wavelength Division Multiplexing (DWDM) infrastructure (1 to 100Gbps).

Ethernet

A national, carrier-class, dedicated and symmetrical layer-two, point-to-point connection between end user sites.

You can aggregate our ethernet services into scalable Points of Interconnect (up to 10Gbps) and add extensions to deliver their service over a dedicated fibre pair of up to 35km (100Mbps, 1Gbps or 10Gbps).

Dedicated Internet Access

A ready-to-go fibre optic internet access service you can offer to your end customers. We own the UK's second largest network, so you don't have to invest in your own internet transit and peering infrastructure, meaning you can price more competitively in the current market.

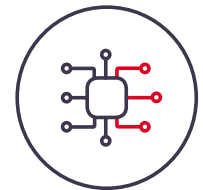

For more information about our wholesale services, visit virginmediabusiness.co.uk/wholesale

Our UK network

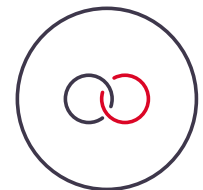

These maps will take you on a journey of our UK-wide network and data centre footprint, detailing how our recent infrastructure investments have delivered high-bandwidth, high-availability connectivity to an increasing number of businesses.
